Johnson, E., Wolfe, J. (2017). Molt in Neotropical Birds. Boca Raton: CRC Press, <https://doi.org/10.4324/9781315119755>. COPY. Molt is an important avian life history event in which feathers are shed and replaced. The timing, duration, seasonality, extent and pattern of molt follows certain strategies and this book reviews and describes these strategies for nearly 190 species based on information gathered from a 30-year study of Central Amazonian birds.

Molt in Neotropical Birds | Taylor & Francis Group
Molt in Neotropical Birds: Life History and Aging Criteria PDF. We started with little information on the molt sequences of the species involved, so we began by applying a well-developed framework of understanding molt patterns from temperate species. After capturing and collecting data from thousands of birds, and taking thousands of photos, a ...

Bucconidae (Puffbirds) | Molt in Neotropical Birds ...
Most of the studies about molt in Neotropical resident bird species have been focused on the timing of molt in relation to other events of the annual cycle as phenology (Poulin et al. 1992) and ...

Molt in Neotropical Birds: Life History and Aging Criteria ...
Molting is the process of a bird shedding old, worn feathers to replace them with fresh plumage. A molt may be partial and replace just some of a bird's feathers or complete when all the feathers are replaced at once. The time it takes to complete a molt varies for different species, but may last as little as two weeks or as long as several years.

How and Why Birds Molt
Molts Through a Bird's Life Cycle Molting varies among groups of birds and environmental differences throughout the seasons. Small passerine birds (Cardinal, sparrows, juncos, and buntings) obtain their adult plumage in a single year while gulls and some birds of prey take 2-4 years. Eagles and condors acquire their adult plumage in 5 years.

Molt in Neotropical Birds: Life History and Aging Criteria ...
The prebasic molt is a perilous period for songbirds, characterized by heightened energetic demands and vulnerability to predators. Given these vulnerabilities, songbirds are under selective pressure to locate and use quality habitat during the prebasic molt, potentially resulting in site fidelity between years.
